Table of Contents

1 Smart Propagation Environment **1**

V. Degli-Esposti, M. Albani

1.1 Introduction: Large Intelligent Metasurfaces 1
1.2 Antenna-Array-Like Macroscopic Modeling 4
1.3 UTD ray-based macroscopic modeling 8

2 Beyond cellular Massive MIMO **15**

C. D'Andrea, G. Interdonato, L. Sanguinetti

2.1 Introduction 15
2.1.1 Motivation 16
2.1.2 Brief review of state-of-the-art 17
2.2 Distributed multiple-antenna technologies 18
2.3 Cell-free massive MIMO 20
2.3.1 Key features and benefits over cellular networks 21
2.3.2 Centralized and distributed operation 24
2.3.3 Implementation Constraints and Challenges 25
2.4 Enabling Cell-free Technologies 28
2.4.1 Radio Stripes 28
2.4.2 pCell 29
2.4.3 RadioWeaves 30
2.5 Support for 6G use cases 30
2.5.1 Multi-Access Edge Computing 31
2.5.2 Spatial Multiplexing of Heterogeneous Services 32
2.6 Conclusions 33

3 6G Technologies for Localization **41**

D. Dardari, M. Nicoli, M. Brambilla, F. Guidi A. Guerra, F. Morselli, and A. Conti

3.1 Introduction 41
3.2 Near-field localization and tracking using large intelligent surface (LIS) and massive antenna arrays 43
3.2.1 Performance limits 43
3.2.2 Algorithms 44
3.3 RIS-aided localization 45
3.3.1 Performance limits 45
3.3.2 Algorithms 46
3.4 Heterogeneous and cooperative localization 48

3.4.1 Sensor fusion and cooperation . . . 48
3.4.2 ML-based algorithms . . . 49
3.5 Sensor navigation for non-collaborative tracking . . . 51
3.6 Simultaneous localization and mapping (SLAM) . . . 54
3.7 Case study 1 - Cooperative localization in vehicular networks . . . 56
3.8 Case study 2: Heterogeneous localization in 3GPP indoor open office scenario 58
3.9 Case study 3: UAV cooperative navigation . . . 59
3.10 Perspectives . . . 61

4 Wireless Communications aided by Reconfigurable Intelligent Surfaces 71
A. Zappone, S. Buzzi
4.1 Introduction and Motivation . . . 71
4.2 Optimization techniques for RIS-aided wireless communications . . . 74
4.3 Overhead-aware resource allocation . . . 78
4.3.1 RIS optimization . . . 79
4.4 Numerical results . . . 80
4.5 Concluding remarks . . . 83

5 Terahertz communications 87
G.Cuozzo, G.Pasolini
5.1 Introduction . . . 87
5.2 Channel and propagation modeling . . . 88
5.3 Physical layer aspects . . . 90
5.3.1 Reaching the THz band: up-conversion or down-conversion? . . . 90
5.3.2 The new frontier: graphene based devices . . . 91
5.3.3 Power amplifiers . . . 92
5.3.4 Antennas and beamforming . . . 92
5.3.5 ADCs and DACs . . . 93
5.3.6 Waveforms . . . 93
5.4 MAC protocols . . . 94
5.5 Resource Allocation Strategies . . . 96
5.6 Standardization activity . . . 97
5.7 Conclusions . . . 98

6 Role of photonics in next generation fronthaul/backhaul links 107
P. Castoldi, L. Valcarenghi, R. Sabella
6.1 Introduction . . . 107
6.2 Photonics for fronthaul . . . 108
6.3 Photonics for backhaul . . . 110
6.4 Integrated photonics for 5G and beyond . . . 111
6.5 Future Vision of Photonics for 6G . . . 112
6.5.1 Silicon Photonics for Data Centers . . . 112
6.5.2 Photonic Interconnect to Scale up Future HW Platforms . . . 113
6.5.3 Silicon Photonics Components for Future Radio Systems . . . 113
6.5.4 Innovative Optical and Wireless Network Global Forum Initiative . 114
6.6 Conclusions . . . 115

7 Co-designed Communication and Sensing **117**
L. Pucci, E. Matricardi, D. Tagliaferri, M. Mizmizi, A. Giorgetti
7.1 Introduction and Use Cases . . . 117
7.1.1 Aspects of integrated sensing and communication (ISAC) . . . 118
7.2 Beampattern design . . . 120
7.3 Waveform design . . . 123
7.3.1 Orthogonal Frequency Division Multiplexing (OFDM) . . . 123
7.3.2 Orthogonal Time Frequency Space (OTFS) Modulation . . . 126
7.3.3 Smart Dual Domain Waveform Superposition . . . 128
7.4 Conclusions and Open Challenges . . . 129

8 Massive Multiple Access for 6G **137**
E. Paolini, L. Valentini, M. U. Khan, F. Babich, M. Comisso, V. Tralli
8.1 Introduction . . . 137
8.2 From 5G to 6G . . . 139
8.3 Next Generation MMA: Envisaged Technologies . . . 140
8.4 Next Generation MMA: Technical Aspects . . . 143
8.4.1 Coverage in Massive Multiple Access Applications . . . 143
8.4.2 Coded Random Access with Massive MIMO . . . 145
8.4.3 Coded Random Access with Power Diversity . . . 146
8.4.4 Energy Efficiency Limits . . . 148
8.4.5 Deep Learning for Massive Multiple Access . . . 150
8.5 Conclusions . . . 152

9 High-resolution SAR imaging for urban mobility **159**
Stefano Tebaldini, Dario Tagliaferri, Marco Manzoni, Marco Rizzi, Andrea Monti Guarnieri, Claudio Prati, Monica Nicoli, Umberto Spagnolini, Ivan Russo, Christian Mazzucco
9.1 Introduction . . . 159
9.2 SAR Imaging . . . 162
9.3 Collection of experimental SAR data . . . 165
9.4 Data processing . . . 167
9.4.1 Navigation . . . 167
9.4.2 SAR focusing . . . 168
9.5 Results . . . 169
9.6 Concluding remarks . . . 172
9.7 Acknowledgments . . . 173

10 Semantic and goal-oriented communications **179**
S. Barbarossa, F. Pezone
10.1 Introduction . . . 179
10.2 Semantic Information . . . 181
10.3 Semantic communication . . . 185
10.4 Goal-oriented communication . . . 186
10.4.1 Goal-oriented communication based on the information bottleneck principle . . . 188
10.4.2 Dynamic edge learning based on the IB principle . . . 190
10.4.3 Further extensions . . . 194

10.5 Conclusions 195

11 Physical layer security for 6G systems **201**

S. Tomasin, L. Mucchi, D. Marabissi, D. M. Osorio

11.1 Introduction 201
11.2 Motivation for PLS in 6G Networks 202
11.2.1 PLS Techniques 203
11.2.2 PLS in 6G Scenarios 203
11.3 PLS for Massive IoT Devices 205
11.3.1 Physical Layer Key Generation 206
11.3.2 Physical Layer Authentication Mechanisms 208
11.3.3 Physical Layer Confidentiality 212
11.4 Advanced PLS Technologies 215
11.4.1 PLS for MIMO Systems 215
11.4.2 IRS to Provide PLS 218
11.4.3 PLS for Non-terrestrial Networks 219
11.5 Physical-Layer Privacy Mechanisms 222
11.5.1 Location Privacy 223
11.5.2 Identity Privacy 226
11.5.3 Covert Communications 227
